

# SPF, DMARC, and DKIM

SPF (Sender Policy Framework) is an email authentication record, which is essentially used to define which specific servers are permitted to send mail on behalf of a domain.

<https://docs.ukfast.co.uk/email/spf.html>

---

## Adding an SPF record

[useful SPF record generator tool](#)

SPF records need to be added as a TXT DNS record.

example:

```
"v=spf1 mx a ip4:185.216.77.122"
```
