WordPress Debug Mode

==========

WordPress Debug Mode

WordPress comes with a built-in debugging feature, with a few options we can set for viewing debug logs.

All of these changes are made within the wp-config.php file -

NOTE: You must insert this **BEFORE** `/* That's all, stop editing! Happy blogging. */` in the wp-config.php file.

Enable debug mode with standard debug log output on website (shows any debug errors on the website itself by default)

```
// Enable WP_DEBUG mode
define( 'WP_DEBUG', true );
```

Change WP_DEBUG display method on site: - Prevents debug errors from being displayed on the website itself:

```
// Disable display of errors and warnings
define( 'WP_DEBUG_DISPLAY', false );
@ini_set( 'display_errors', 0 );
```

Set WP-DEBUG log file:

```
// Enable Debug logging to the /wp-content/debug.log file
define( 'WP_DEBUG_LOG', true );
```
